AD-EOB A/R Capture and Secondary Billing Solution

AD-EOB A/R™ streamlines the processing of Explanation of Benefits (EOBs) and payment-related documents that accompany them. AD-EOB A/R delivers accuracy and efficiency to this critical, yet burdensome task, reducing costs and enabling providers to maximize their claim recovery rate, increasing revenues and profits.

The solution delivers quick identification, capture and validation of required data, and automatic creation of individual EOB images from bulk EOBs. Quicker processing translates into better recovery rate, particularly for supplemental claims.

The intuitive and user-friendly workflow and user interfaces are designed to allow junior A/R personnel to independently manage the vast majority of documents. For more complex payment issues, keyers can sort, flag and route problem documents for further review by more experienced specialists, with just a few keystrokes.

AliusDoc solutions are built to integrate with client systems as easily as possible, requiring far less time and resources to install and maintain. AD-EOB A/R is easily customizable to fit within the environment and workflow of each client, whether a large medical billing service company or a small care provider office.

The logical and streamlined end-to-end capture workflow also saves time and money in the adjacent processes of document handling and proper routing and archiving within your document management system. More accuracy means eliminating the costly tracking and correcting of errors further into the process.

The overall result is the ability to more accurately process more EOBs, payments, and other documents in far less time, with far fewer people. Less experienced staff can focus on conforming documents, while high-value knowledge specialists are able to focus on revenue maximization.

AD-EOB A/R Capture and Secondary Billing Solution

AD-EOB A/R Functionality and Features

Paper EOBs (Explanation of Benefits) and related payment documents (insurance or private/patient) are very costly to reconcile with billing. Additionally, there is a great deal of manual handling when sending out secondary billing. AD-EOB A/R streamlines the processing and capture of all payment documentation, including:

➤ Automatically captures EOB data – patient, payer and line item service details.
➤ Captures accompanying payment information (payer and check/credit/debit information)
➤ Reconciles EOB data with your billing system.
➤ Generates re-composed single-patient images for secondary billing.
➤ Handles multiple EOBs within one document
➤ Captures different types of payments, including:
  ❖ Institutional Checks included with EOBs
  ❖ 'Private payments' from patients (with or without voucher)
  ❖ Credit/Debit card payments (with or without voucher)
➤ Indexes and routes EOBs and payment documents from plans and patients

Flexible Capture and Validation of All EOB Data

Patient data, service line items, and insurance carrier information are all captured and automatically validated against your billing system and initial claim data, presenting only non-matching data for manual review. AD-EOB also automatically applies math balancing rules to ensure all charges were accurately captured.

Makes Secondary Billing HIPPA-Compliant

Automatically generate single-patient images from EOB pages containing multiple patients per page. These single-patient images can then be faxed or mailed for secondary billing, without costly manual photocopying and redaction of other patients' information.

AD-EOB A/R Capture and Secondary Billing Solution

AliusDoc Sort, Capture and Index Product Platform

The AD-EOB A/R solution is built on top of AliusDoc's AD-SCI™ product platform. AD-SCI automates the entry and validation of data from structured and unstructured forms as well as white mail correspondence. The ultimate objective is to automate manual data entry, manual pre-processing, image classification and form identification while streamlining the data entry process, reducing operational costs, and increasing productivity.

About AliusDoc

AliusDoc provides document imaging solutions, data capture and I/OCR technologies. AliusDoc possesses extensive knowledge of forms processing applications within the horizontal marketplace as well as specific vertical application expertise within the financial, healthcare, and government sectors. AliusDoc offers forms processing solutions as well as professional and project management consulting services.
